The Art of Wax Resist: Contemporary Textile Design

Student: Rakhi Roy, M. Des-Textiles

Supervisor: Prof. Sankar Roy Maulik

The primary objective of this project was to explore the creative potential of traditional wax resist techniques in contemporary textile design. An attempt was made to develop nature-inspired textile designs that combine traditional craftsmanship with modern aesthetics. The project also aimed to preserve the artistic value of traditional textile practices while adapting them to suit present-day fashion trends. Furthermore, the project was intended to create unique handcrafted textile products with aesthetic, functional, and commercial value, while promoting the relevance of traditional textile techniques in the contemporary textile and fashion industry.
